

GROWCO is Good News to Grow your Company to the next level.

Growco Underground Tank Gauges (UTG) Systems are widely used in petrol or service stations.

Thirdly, our **Growco** smart probes are among the best brands with measurement accuracy of +/- 0.5mm and measurement height range from 105mm to 3,700mm which can be used in some above ground tanks within the height range. They are also very easy to install with the customers' tanks at the sites.

We are very fortunate with our customers' final choice of our **Growco UTG systems** over other competitors' products available in the markets.

Below are some of our many photographs taken before deliveries to our overseas' customers.

We are very proud that our **Growco UTG systems** have been widely selected by our global customers to install at their petrol or service stations.

Firstly, our **Growco UTG systems** have the 8 inches colour screen as well as the easy to use touch screen for their operators as it is user friendly.

Secondly, our **Growco UTG systems** have option of another type of smart consoles without display but can be connected to the petrol stations' computers with our easy to use software provided. This give our global customers more choices to suit their actual needs and conditions at each petrol station or their unique country's preferences as each petroleum company has their requirements which we can configure our systems to suit them.

We would like to express our sincerest appreciations for their supports and trusts in our high quality **Growco's** products which provide very good value-add to their investments.
