

GROWCO is Good News to Grow your Company to the next level.

Growco GI Series Dispenser Pumps in 4 nozzles / 4 meters / 4 displays type were ready for packaging to one of our international customers.

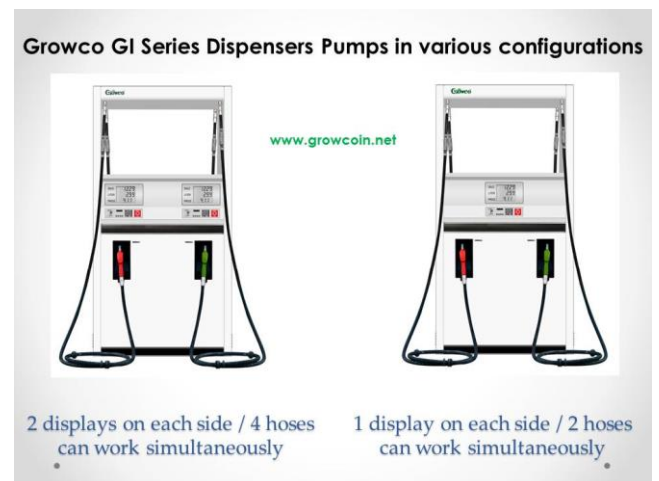

Our customers' choice of our **Growco GI Series dispenser pumps** was strongly based on our better technical design, lower installations costs and ease in maintenance. The other advantages of our **Growco GI Series dispenser pumps** are the ease in operating them without taking too much time during such set up and uses minimum time means maximum usages of the pumping systems to increase their operational productivity as well as increasing their profitability.

Our customers also have the additional benefit that our **Growco GI Series dispensing pumps** can be easily upgradable to automation at their petrol stations as and when necessary in the future to continue to meet their markets' needs and future proof their investments.

We are very pleased to share that one of international customers have placed their major purchase order for the supply of our **Growco GI Series Dispensing / Suction Pumps** for the 4 nozzles / 4 meters / 4 displays type for the petrol stations besides other models that they have purchased from us over the years.

We have shown some of the photographs of our **Growco GI Series Dispensers Pumps** in various configurations as below and / or do feel free to contact us or visit our websites for more details.

This particular model has the 4 hoses x 2 products which work independently at both sides of the pumps (such as 2 hoses on each side of the pump can work simultaneously & independently at any time). This model is very useful for motor cycles fuelling at petrol stations during peak periods as four motor cycles can do the fuelling at the same time. This is preferred by the motor cyclists as they have lesser waiting time and at the same time, the petrol stations' owners can generate more revenues.

This creates a win-win solution for both the motor cyclists and the petrol stations' owners.
